

# Hiraeth

*Where humanity comes to thrive.*

---

## Purpose

Hiraeth is designed as an alternative to the current world order.

It is founded on the belief that humanity has outgrown many of the assumptions that shaped the industrial age.

As artificial intelligence and advanced technologies continue to transform society, Hiraeth seeks to answer a fundamental question:

### **What should people do when survival is no longer the primary challenge?**

The belief is that capitalism is becoming increasingly misaligned in the age of AI and that existing countries are overly optimized around work rather than natural human rhythms.

Hiraeth is an attempt to design a society that leverages technological progress to maximize human flourishing.

---

## Foundational Belief

The purpose of civilization is to progressively free human beings from necessity so that they may pursue higher-order forms of existence.

Human potential is sacred.

Work is not.

As technology advances, citizens increasingly rely on intelligent systems, digital infrastructure, automation, and advanced tools to handle repetitive, dangerous, and low-value tasks.

Technology is not viewed as a threat.

It is viewed as one of humanity's greatest achievements.

Citizens do not derive dignity from labor hours.

They derive dignity from contribution, competence, creativity, wisdom, relationships, craftsmanship, learning, and personal growth.

The expectation is that every generation should spend less time surviving and more time creating, exploring, mastering, and living.

---

## **Core Values**

### **Freedom of the Individual**

Citizens should have maximum freedom to pursue their interests, ambitions, lifestyles, and personal expression.

Freedom is considered one of the foundational requirements for human flourishing.

---

### **Responsibility Towards the Nation**

Citizens are expected to contribute positively to society and uphold their responsibilities toward Hiraeth and its continued success.

Freedom and responsibility are viewed as complementary rather than opposing forces.

---

### **Competence as a Person**

Competence is viewed as a fundamental life skill rather than merely professional achievement.

Citizens are encouraged to develop competence across all aspects of life.

Examples include:

- Decision making
- Health and well-being
- Relationships
- Emotional maturity
- Financial responsibility
- Creativity
- Learning
- Craftsmanship
- Professional excellence

The goal is to cultivate capable, self-reliant, high-agency individuals.

---

# Population

Target population: approximately 50 million people.

Hiraeth is designed around a highly skilled population with strong interests in:

- Arts
- Technology
- Sciences
- Mathematics
- Economics and more

Citizens are encouraged to pursue mastery within their chosen domains while remaining intellectually curious across disciplines.

---

# The Nature of Work

Technology performs the majority of repetitive, manual, and low-value tasks.

Citizens focus on specialized and high-value contributions.

Examples include:

- Technology
- Science
- Mathematics
- Economics
- Law
- Research
- Entrepreneurship
- Art
- Music
- Design
- Other expert disciplines

The expectation is that every citizen develops specialized skills and contributes intelligent value to society.

However, these contributions are not limited to serving Hiraeth alone.

Citizens are encouraged to become world-class experts whose work influences and supports the global economy.

Hiraeth seeks to become a concentration of exceptional talent whose citizens serve as global leaders in their respective fields.

Work exists primarily as a vehicle for contribution, creativity, mastery, and impact rather than survival.

---

## Relationship with Technology

Citizens view technology as a civilizational success rather than a threat.

There is little cultural attachment to work for its own sake.

Technology is seen as a tool for expanding human capability, increasing freedom, improving quality of life, and unlocking new forms of creativity, learning, communication, and discovery.

Advanced software, artificial intelligence, robotics, digital networks, and interactive technologies are integrated throughout society.

As technology becomes capable of performing more tasks and augmenting more aspects of human life, society views this as progress.

Citizens willingly adopt new technologies when they improve human flourishing and create opportunities for higher-order pursuits.

The goal is not simply automation.

The goal is to use technology to expand what human beings are capable of achieving.

---

## Cultural Character

The intended cultural atmosphere combines elements of:

- Europe
- New York
- San Francisco

Hiraeth values both excellence and quality of life.

Citizens are encouraged to regularly rest and recharge rather than live in a state of continuous burnout.

The society is designed around sustainable high performance, personal fulfillment, and alignment with natural human rhythms.

Technology and progress exist to improve life rather than consume it.

Citizens are expected to live rich and multidimensional lives rather than define themselves solely through their professions.

---

## **Technology and Entrepreneurship**

Technology is deeply respected.

Entrepreneurs are deeply respected.

Innovation, creativity, and problem-solving are viewed as important societal contributions.

Hiraeth embraces technological advancement as a core part of its identity.

Builders, creators, inventors, researchers, artists, and thinkers are celebrated for expanding the possibilities available to humanity.

The nation encourages the development of new technologies, platforms, scientific breakthroughs, digital experiences, and tools that improve human life.

Technology is viewed not merely as infrastructure, but as one of the primary ways humanity explores, creates, communicates, and progresses.

---

## **Quality of Life**

A basic quality of life is guaranteed for all citizens.

Hiraeth is designed so that citizens can enjoy freedom, pursue mastery, and participate meaningfully in society without being trapped in repetitive or low-value labor.

Citizens are free to pursue contribution because their basic existence is secure.

---

## **National Dish**

Bread

---

# Economy

The nation's primary export is high-leverage work.

Citizens create value through intelligence, expertise, creativity, innovation, and specialized knowledge.

The economy is built around producing the highest-value contributions possible rather than labor-intensive outputs.

Hiraeth exports ideas, innovation, creativity, expertise, intellectual property, scientific advancement, artistic excellence, technological breakthroughs, and entrepreneurial outcomes.

Its citizens function as global specialists whose knowledge and capabilities are sought after across industries, institutions, and nations.

Hiraeth exports leadership, expertise, research, innovation, technology, and world-class talent.

---

# Governance

Hiraeth operates using a weighted voting system.

Voting is not treated as a universal obligation or civic duty.

Participation in decision-making is viewed as a privilege earned through contribution to the nation.

The ability to influence national decisions increases with demonstrated contribution.

# Voting Tiers

1. Top Tier: 3 votes
2. Mid Tier: 2 votes
3. Low Tier: 1 vote

Voting weight is determined through a broader assessment of an individual's contribution to society.

Economic contribution is only one component.

Other forms of contribution may also be recognized and rewarded.

The exact framework for evaluating contribution will be defined further.

The objective is to align influence with demonstrated contribution while maintaining citizen participation.

Voting is viewed as a reward for contribution rather than a duty imposed upon citizens.

---

## Summary

Hiraeth is a nation of approximately 50 million people built around freedom, responsibility, and personal competence.

It is a society where technology handles an increasing share of routine work, citizens focus on high-value intellectual and creative contributions, technology and entrepreneurship are respected, quality of life is guaranteed, and governance evolves beyond traditional bureaucratic systems.

Its citizens are encouraged to become world-class experts whose contributions extend beyond national borders and help shape the global economy.

Hiraeth seeks to create capable individuals, meaningful lives, and a civilization optimized for human flourishing in the age of AI.

Its ultimate goal is not economic growth alone, but the creation of a society in which human beings are increasingly free to pursue mastery, creativity, relationships, wisdom, exploration, and fulfillment.
